

Argus SaaS – On demand

Oracle Argus Safety remains the leading global PV database.

The hosted offering is based on rapidLIVE, an accelerated, ready-to-use implementation offered in collaboration with Oracle for small and mid-sized customers. This unique implementation approach is not only focused on price, which still remains a core advantage, but is also designed to deliver the following benefits in a fixed price package;

- Quick implementation times
- Fast Return on Investment
- Low resource requirements
- Robust validation approach

Software as a Service for Oracle Argus Safety takes this even further by providing immediate access to a ready-to-use Argus environment.

The Approach

The SaaS approach for Oracle Argus safety includes access to a dedicated production tenant within a multi-tenant Argus environment. This tenant is pre-configured with a ready to use workflow and all required access rights.

Each new customer is provided access to a dedicated tenant, created as a clone of the master tenant. This allows for secure safety case management within a controlled environment.

A training instance with an identical configuration is also provided.

pharmasol maintains patches on the Argus environment and communicates with clients regarding the applicable patch application and timing on an ongoing basis. Updates are limited to bi-annually.

What's included?

Application	<ul style="list-style-type: none"> • Oracle Argus Safety v7.0.4.x (Argus Standard Edition)
Environments Installed	<ul style="list-style-type: none"> • PRODUCTION • TRAINING

Validation Package	<ul style="list-style-type: none"> • Fully executed IQs and SATs
Training	<ul style="list-style-type: none"> • User Training = 5 days

The need:

To even further increase the flexibility of a hosted Oracle Argus safety offering.

The solution:

Leverage the existing rapidLIVE implementation approach to provide an on-demand SaaS model.

The benefit:

Argus rapidLIVE SaaS has low start-up costs, no long term commitments and per case pricing. You can be up and running within weeks and the package includes training and initial system set-up.

“ We think that for customers with low annual case volumes but with the need for an enterprise solution that meets the rigorous regulatory demands, Oracle Argus Safety SaaS built on rapidLIVE is a perfect fit.

”

Tim Billington, pharmasol CSO
